

Hello everyone!

How are you? I hope you are all doing great.

Today, Let's try to make a fantastic craft. I hope you will enjoy doing this with your parent.

For this craft, you will need:

1. A black piece of paper
2. Scissors
3. Glue
4. Colored paper (Red, blue, yellow, white and many more!)

Cut these shapes out of your colorful paper:

1 big triangle

2 smaller triangles

1 big rectangle

1 white circle

1 oval

1 square

many small yellow triangles

The big triangle is the roof of your rocket.

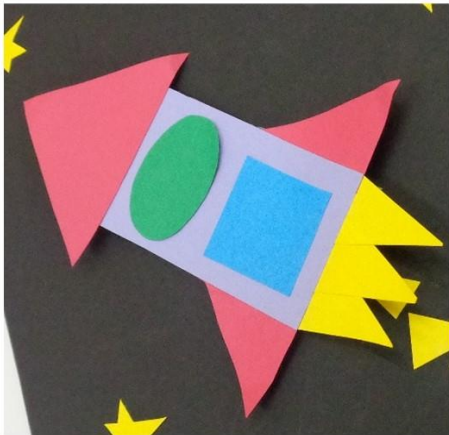

The rectangle will be its body.

The oval and the square will be its windows.

The small yellow triangles will be the rocket's flames at the bottom.

The white circle will be the moon.

Stick these pieces of paper together to make rocket that looks like this.

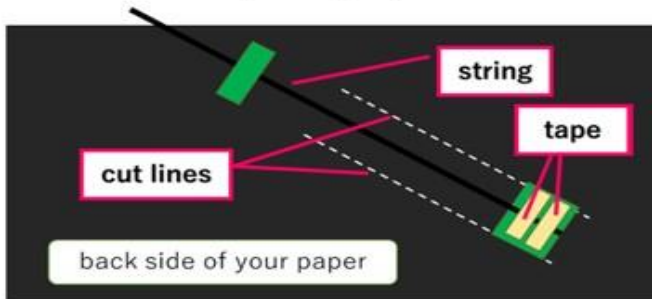

Now, let's make your rocket move. Just follow along the pictures below.

Ask your parent to cut two long lines on this part of the paper. Your parent can use a ruler to make the cut lines straight.

Insert a small piece of paper on this part. Fold it and glue it. This is the back side of your paper.

Tape a string on that folded part. Put the other end of the string under this small piece of paper. This small piece of paper will hold your string in place. Make sure to secure its sides with a tape.

Glue or tape your rocket on the front side of the small paper you put between the cut lines.

You can now pull the string upwards and watch your rocket launch!

Were you able to do it? If you did, please send us the picture of your work. I am sure that you did an amazing job with it.
